Vaddio Announces First Pro-AV USB 2.0 Wireless Microphone System

MINNEAPOLIS, MN (2012) – The EasyTALK Wireless USB Mic System is the worlds first professional-quality wireless microphone system designed to plug directly into your PC. It features a high-quality unidirectional lavalier microphone and belt pack transmitter with up to ten hours of battery life. And the 2.4GHZ full frequency spectrum is based on a wireless digital transmitter and receiver that offer interference-free operation and wide-band sound quality.

“We wanted to have a wireless USB microphone system we could plug directly into a PC,” explained Rob Sheeley, President of Vaddio. “As a lot of our products are used to support computer applications like lecture capture, streaming and video conferencing, we saw a real need for a professional-quality audio system to support these applications.”

There are two audio outputs to connect directly with your room’s existing audio system and with the enhanced DSP functions; you can customize the audio for specific room and speaking conditions. Besides the two balanced and unbalanced outputs, the wireless mic system also incorporates a USB audio output.

The USB audio output can be directly connected to a PC as a microphone input. Whether your application is streaming or lecture capture – even video conferencing – adding professional audio is no longer an issue. And because it uses a standards-based UAC USB driver it's truly a plug and play device so no software, drivers or configuration is needed – resulting in an easy system setup.
